

Mount Piper to Wallerawang Transmission Line Upgrade Project

MAY 2024

Transgrid will carry out upgrades to its transmission network in the State's Central Tablelands to support the NSW Government's delivery of the Central-West Orana Renewable Energy Zone (REZ)

Why is the project needed?

The Mount Piper to Wallerawang Transmission Line Upgrade Project will strengthen and reinforce the grid in the Central Tablelands, helping to ensure that power from the Central-West Orana REZ can be reliably moved back into the grid and to consumers.

What are we building?

We will:

- build a new 330 kV transmission line between our existing substations located at Mount Piper and Wallerawang
- Widen the existing 132 kV line easement from 45 m to 60 m
- Create a new 60 m easement in the section where the transmission line does not follow the 132 kV line easement

What is a Renewable Energy Zone?

REZs are modern-day power stations. They combine renewable energy generation such as wind and solar, storage such as batteries, and high-voltage poles and wires to deliver cheap, reliable and clean electricity for homes and businesses in NSW.

What are the project benefits?

- new local jobs – opportunities for local workers and businesses during construction
- cheaper electricity – improving the affordability of electricity for consumers by increasing bulk supply and driving down wholesale electricity prices
- improved reliability – through strengthening and reinforcing the grid in the local region
- reduced emissions and a greater mix of renewable energy in the National Electricity Market.

Project location

The Wallerawang and Mount Piper area (shown in the map overleaf) is located approximately 20 kilometres north-west of Lithgow on the western fringes of the Blue Mountains.

Image: Photo of current 45m easement for 132 kV transmission line. Transgrid is proposing to increase the width of the easement by approximately 15 m to the north (left hand side) to accommodate the new 330 kV transmission line. The 330 kV line would replace the 132 kV line shown above.

The preferred route

What's happening?

Transgrid has identified a preferred route (see map) and is seeking community and stakeholder feedback on this option. Information on the route selection process and the preferred route is available on our webpage at transgrid.com.au/wallerawang

How can you be involved?

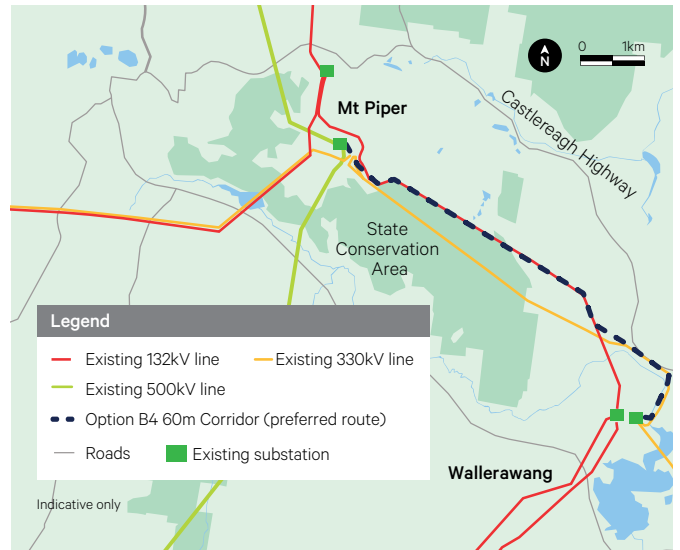

Transgrid recognises the vital role that landowners and the community have in the planning and delivery of our projects. We are committed to talking to the community to help us shape the best possible solution.

We encourage you to:

- email us or call our community hotline 1800 222 537
- visit our webpage for project updates and to subscribe to receive the latest news
- share your feedback and ideas at community information sessions (to be advertised in advance)
- request a meeting.

Next steps

Using landowner feedback, detailed field studies and engineering concept designs, the project team will further refine the route during the preparation of the Environmental Impact Statement (EIS). Transgrid will follow a comprehensive environmental assessment process and formally submit the EIS to the NSW Government for approval.

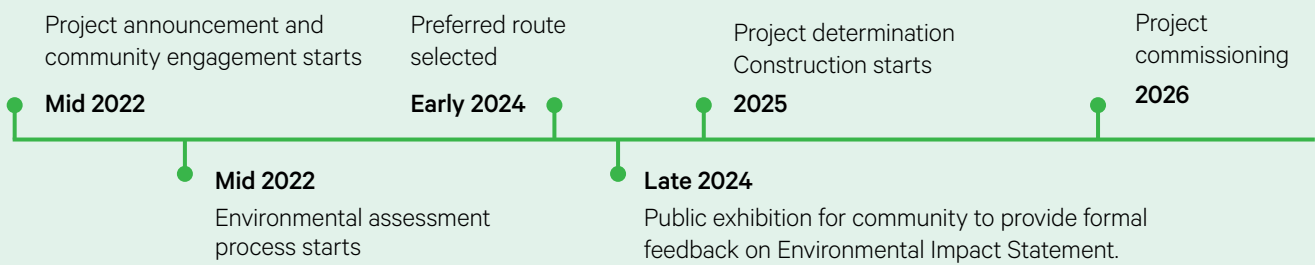

About Transgrid

Transgrid operates and manages the high-voltage network in NSW and the ACT.

We operate a safe, reliable and efficient high-voltage grid that connects electricity generators to one in three Australians.

We are building the future grid to enable greater renewable integration and drive down wholesale electricity prices.

Key project dates

Connect with us

Transgrid is committed to working with landowners and communities through the development of HumeLink. Please connect with us for more information.
