

Powering Sydney's Future

POTTS HILL TO ALEXANDRIA TRANSMISSION CABLE PROJECT COMMUNITY NOTIFICATION

Construction of joint bays at Camdenville Park, St Peters

TransGrid is installing a new underground electricity cable from Potts Hill to Alexandria. The Powering Sydney's Future project will help ensure a safe, reliable and affordable energy supply for Sydney's CBD and surrounding areas. You can view a map of the cable route at www.transgrid.com.au/psf. Thank you for your patience during our work in your area so far.

Trenching work on May Street, St Peters is on schedule and we expect to reach the Princes Highway intersection in early June. We will then work at night when traffic volumes are lower to trench across the Princes Highway.

Construction of the new Bedwin Road cable and cycle bridge is progressing well and the bridge is expected to be open to the community in August 2021. Another construction crew is currently drilling beneath the intersection of Edgeware Road and Llewellyn Street. When this drilling work is finished, we will trench along Edgeware Road towards the new Bedwin Road bridge.

Work at Camdenville Park

This letter is to let you know about the next stage of work in Camdenville Park, which is to install two underground connection points, known as 'joint bays'. Joint bays are installed about every 900 metres along the cable route to enable sections of cable to be fed into the ground and then joined together.

Each joint bay has a maximum of four ancillary pits for communications, monitoring and safety systems. While two joint bays will be installed, one will be used now for cables being installed for this project. The second joint bay will be installed now but used for cables to be installed in the future.

Construction of the joint bays will start from **Thursday 3 June 2021**. This work will take around **three weeks** to complete, weather and ground conditions permitting. Please refer to the map overleaf for the location of the joint bays.

Work activities

- > Delivering plant and equipment to site.
- > Installing temporary fencing and safety barriers.
- > Tree trimming (as required) to create a safe distance from equipment (directed by a qualified arborist).
- > Digging a trench about two metres wide using an excavator.
- > Excavating two joint bay and minor ancillary pits. Each joint bay is around 10 metres long and three metres wide.
- > Installing precast concrete sections in the pit to form the floor and walls of the joint bays and ancillary pits.
- > Installing conduits (pipes).
- > Pulling cables and installing conduits between the joint bay and the ancillary pits.
- > Temporarily restoring the area as required.
- > Using a pump/vacuum truck to remove water as required.

Work hours

Standard hours for this work in Camdenville Park are **7am – 6pm, Monday to Friday** and **8am – 1pm on Saturday**.

How will the work affect you?

- > The work will be noisy at times, but we will make every effort to keep noise to a minimum.
- > Access for construction vehicles will be via an existing access track within Camdenville Park. The entry/exit point for this track is at May Street.
- > A section of Camdenville Park will be fenced off and unavailable to park users for the duration of the work.

Location of joint bay work

What's next

We expect to be working in Camdenville Park until July 2021 but work will not be continuous during this period. Following joint bay installation we will continue to install and join cables, install some minor ancillary pits, and restore the area. We will keep you informed about work in your area.

COVID-19 Safety protocols

The health and safety of our people, customers and the community and ensuring a reliable supply of electricity to NSW and the ACT are our highest priorities during the COVID-19 crisis.

TransGrid and our contractors, as a minimum, adhere to the recommendations of SafeWork NSW along with the advice of other state and federal authorities to effectively manage the risk of COVID-19 to workers and others in the work environment. This involves maintaining effective controls including social distancing, stringent hygiene and specific work planning and access protocols at our work sites.
