

Install solar panels to the pavilion

Tumut Show Society

Snowy Valleys

Funding requested: \$20,000

Summary: The Tumut Show Society proposes the installation of a solar energy system on the pavilion at the Tumut Showground. This project aims to significantly reduce ongoing electricity costs, improve environmental sustainability, and increase energy reliability for all users of the facility. The pavilion is a central hub for our annual show and is also used year-round by various community groups, events, and private functions. Installing solar panels will support our long-term goal of making the showground more energy-efficient and self-sufficient, ensuring we can continue to provide a valuable space for community activities while reducing our carbon footprint. The system will also serve as a visible commitment to sustainability and responsible energy use within our rural community.

Community value: The pavilion is a central hub for our annual show and is also used year-round by various community groups, events, and private functions. Installing solar panels will support our long-term goal of making the showground more energy-efficient and self-sufficient, ensuring we can continue to provide a valuable space for community activities while reducing our carbon footprint. The system will also serve as a visible commitment to sustainability and responsible energy use within our rural community.
