Telecommunications Facilities Solution

TransGrid offers a Telecommunications Facilities service designed exclusively to meet the needs of our customers.

This service was developed to capitalise on TransGrid's existing telecommunications infrastructure in New South Wales. It provides customers with an economical solution at strategically located, purpose built sites that offer optimum coverage with the highest security.

TransGrid's telecommunications infrastructure facilities include more than 120 telecommunications structures, 1200 kilometres of microwave radio systems, VHF and UHF radio network and an optical fibre backbone that spans some 2000 kilometres.

Customer benefits

Scalable

Co-location service agreement options enabling cost effective customer network expansion with 24 hour access.

Tailored agreements

Tailored service agreements specific to customer requirements.

Security

All facilities are engineered and managed to carrier grade specifications and provide customers with a highly secure environment.

Facilities support

A comprehensive range of in-house support offerings tailored to meet customer requirements.
